

Creative Solutions that Work

Reliable, available,
and knowledgeable
in every aspect...

Fountains

Fountains provide aeration for lakes and keep the water clean. Oceans and natural lakes are able to thrive because they have mass circulation that allows them to transfer oxygen into their system. It is this circulation and oxygen transfer that has allowed these bodies of water to stay healthy. Lakes and ponds don't have that great circulation and are unable to maintain fresh, clean water.

With fountains the circulation is provided and these bodies of water can thrive and live. Not only are the fountains beautifully displayed but they are also functional.

Sullivan Electric & Pump, providing the best in:

Design Consultation Support,
Feasibility Studies, Water Efficiency
Studies, Water Resource
Management, System Design, Water
Re-Use, Water Filtration, Water
Storage and Transfer Systems, Lake
Refill Systems and Fountains,
Proactive Maintenance Programs,
Preventative Maintenance, System
Upgrades, Service Agreements,
Variable Frequency Drives, AC
Motors, DC Motors, Rewind, Dip
and Bake, Motor Bearing Replacement,
Vertical Hollow Shaft, Turbine
Pumps, Centrifugal Pumps, Submersible
Pumps, Machine Shop, Welding
Services, Control Panels, Pump
Repair and Replacement, Lightning
Protection, Transient Surge
Protection, Bearing Housing Repair,
Shaft Repair, Motor Service
Comparison Test, Dynamic Balancing
