

Preventative Maintenance Programs

Our reputation?

To be able to diagnose it all.

Not just one part of the operation.

If we find a problem with the pump or motor we have the capability to pull that item, bring it back to our shop, and with our complete repair shop we are able to repair, rebuild, or, with our inventory stocked warehouse, replace it. We also have a collection of loaner motors when watering is a must.

To reduce failures at critical times, Sullivan Electric & Pump, Inc. provides regularly scheduled Preventative Maintenance Programs. We check the entire operation of the equipment, from A-Z.

Example below of a standard maintenance program:

Inspect:

- Electrical Service
- Control Panel
- VFD
- Motors
- Pumps
- Valves
- Tank

Grease / Oil:

- Motors
- Valves
- Pumps

Operational Test and Adjust:

- Pump System
- Safety Alarms

Recommend:

Repairs or Upgrades

Pumps:

- Clean drain tubes, adjust packing or seal, and check for shaft play
- Verify vacuum breaker for anti siphon
- Tighten head bolts, check for excessive noise and vibrations, and repack once per year
- Check the overall system operation and performance

Motors:

- Change Grease
- Change Oil
- Check for Extra Noise and Vibration
- MEG Insulation Resistance Test

We are thorough.
