

## Complete Industrial and Irrigation Service

What gives Sullivan Electric & Pump, Inc. the competitive edge?

### Diversity.

- We design, manufacture, install, and provide all types of pump equipment, irrigation, domestic water, booster stations, and sewage lift stations.
- We have a complete pump and motor repair shop with fully trained, experienced personnel and the only company that can provide all these services in-house.

- We provide lightning protection.

...We do everything.

**We are different** in that we are educated in the field of complete commercial, industrial, and irrigation pump service.

Sullivan Electric & Pump will analyze your entire pumping system. We don't just check your pumps, motors and controls, we look at the entire system to see how it ties into your operation. Is it efficient? It's our job to help your system perform and keep performing at the most efficient, and optimum levels, minimizing potential costly downtime.

In years past, a turf manager would call in an electrician to troubleshoot controls, then a "pump man" to troubleshoot pump problems, and then find a reputable machine / motor repair shop with the ability to diagnose and repair the entire system including custom field welding that was often required.

For today's fast times, one call does it all... in-house, in the field, and on time. We provide turn-key service and repair. Sullivan Electric has expanded its knowledge through diversity.

...a result of experience,  
diversity & attitude.
